CIRIL ENTERPRISE CRM SYSTEM

Comprehensive Architecture, Zoned-Member Operations & Revenue Model

Author: Technical & Commercial Architecture Team | Date: September 2026

1. Executive Summary

The CIRIL CRM is an enterprise-grade platform built specifically for commercial real estate syndication, inter-territory lead brokerage, and national agency coordination. Unlike standard retail CRMs, CIRIL functions as a centralized collaborative marketplace and clearinghouse for a nationwide network of independent commercial real estate advisory firms, known as Member Companies.

The platform orchestrates cross-regional transaction discovery, eliminates territorial friction between brokerage houses, enforces institutional quality standards in client pitches, provides real-time proprietary commercial market intelligence, and automatically manages the monetization and royalty collection mechanism that powers CIRIL as an apex corporate entity.

2. Zoned-Member Ecosystem & Institutional Hierarchy

The core structural foundation of CIRIL is its geographic and institutional federation. Rather than operating as a conventional single-firm brokerage, CIRIL operates as an alliance of certified commercial advisory firms arranged into an organized territorial matrix.

2.1 Geographic Hierarchy

The administrative system enforces a rigorous four-tiered geographic hierarchy that maps every business transaction, requirement, and participant:

- **Country Tier:** National sovereign boundaries establishing overarching corporate governance, legal jurisdiction, and currency standards.
- **Zone Tier:** Strategic multi-state regions (e.g., North Zone, West Zone, South Zone, East Zone, Central Zone) managed by designated Zonal Directors who oversee multi-market mandates.
- **State Tier:** State-level administrative jurisdictions governing local stamp duty regulations, state tenancy acts, and industrial zoning parameters.
- **City Tier:** Metropolitan commercial centers (e.g., Mumbai, Bengaluru, Hyderabad, Delhi-NCR, Pune, Chennai) where localized advisory teams execute physical space procurement and lease transactions.

2.2 Stakeholder Roles & Access Control

Access and operational capabilities within the CRM are strictly governed by custom role-based middleware that separates strategic administration from transactional brokerage:

Role	Scope / Jurisdiction	Key Operational Responsibilities
Central Administrator (Role 1)	National / Entire Network	Governs platform settings, approves new member firms, authorizes vertical expansions, audits fee allocations, tracks corporate royalty collections, and oversees national research publication.

Role	Scope / Jurisdiction	Key Operational Responsibilities
Zonal Head (Role 2)	Multi-City Regional Zone	Oversees member firms within their geographic zone, monitors cross-city lead handoffs, mediates regional conflicts, and reviews regional transaction pipelines.
Member Company (Role 3+)	Designated City / Territory	Independent commercial real estate brokerage company affiliated with CIRIL. Originates requirements (Lead Giver) or executes local site searches and negotiations (Lead Receiver).
Advisory Associates / Brokers	Assigned Micro-Markets	Individual transaction managers who log property inspections, communicate with corporate occupiers, submit proposal decks, and record deal milestones.

3. End-to-End Operational Lifecycle

The life cycle of every commercial transaction on the CIRIL platform adheres to a structured, auditable six-phase workflow engineered to prevent disputes, maintain accountability, and maximize deal closure rates.

1. **Mandate Origination (Lead Giver Stage):** A member firm in City A secures a mandate from a corporate client seeking commercial space in City B. The originating broker enters comprehensive mandate parameters, including corporate entity details, key decision makers, operational space requirements (square footage, power load, floor plate), target budget, and priority tier.
2. **Central Allocation & Handshake:** The mandate is routed through the central clearance desk to a vetted Member Company located in the destination city (Lead Receiver). The recipient firm receives an automated alert and must formally review and accept the mandate within the system, locking in mutual representation covenants.
3. **Property Sourcing & Proposal Generation:** The Lead Receiver conducts micro-market searches and leverages CIRIL's built-in proposal engine. The system generates standardized 'First-Cut Proposals' (initial options and rate comparisons) and 'Detailed Institutional Proposals' with financial analyses, building specifications, and landlord profiles branded with CIRIL's corporate identity.
4. **Inspection, Negotiation & Pipeline Tracking:** Every interaction—including site inspections, landlord term-sheet submissions, counter-offers, and legal drafts—is logged in the deal's chronological remarks history. The deal status progresses dynamically through seven distinct negotiation milestones.
5. **Transaction Conclusion (Agreement Execution):** Upon execution of the registered lease deed or outright sale agreement, the mandate enters Negotiation Stage 7 (Concluded). The lead receiver inputs confirmed transaction metrics (final lease rate, sanctioned area, lock-in period, or capital transaction value).
6. **Fee Apportionment & Royalty Settlement:** The system calculates the gross brokerage, splits the fee between Lead Giver and Lead Receiver, computes CIRIL's corporate royalty, and generates automated closure alerts to all corporate stakeholders. The settlement is tracked until full financial remittance.

4. Commercial Architecture & Revenue Generation Model

CIRIL operates on a sustainable corporate network monetization model. The apex company earns revenue by taking a dedicated royalty percentage from every concluded deal conducted across its member network, ensuring complete alignment of incentives with its zoned members.

4.1 Transaction Mechanics & Fee Structures

The platform categorizes commercial real estate transactions into two principal financial categories, each with distinct brokerage calculations:

Transaction Category	Valuation & Base Formula	Gross Brokerage Standard
Commercial Lease / Rental	Base Rent = Monthly Rent Rate (per sq ft) × Chargeable Area (sq ft)	Equivalent to 1 Month (30 Days) Rental Value [or Rent × (Lease Days / 30)]
Outright Purchase / Sale	Total Consideration = Capital Rate (per sq ft) × Total Land/Building Area	Fixed 1.00% of Total Transaction Consideration Value

4.2 Inter-Member Brokerage Split (LG vs LR)

To encourage nationwide cooperation, the total brokerage pool is distributed between the mandate originator and the executing partner according to contractual equity guidelines established within the platform:

- **Lead Giver (LG) Share — 30%:** Awarded to the member firm that captured, qualified, and introduced the corporate relationship into the CIRIL clearinghouse.
- **Lead Receiver (LR) Share — 70%:** Allocated to the destination member firm responsible for sourcing properties, conducting physical inspections, negotiating commercial terms with landlords, and driving the transaction to legal registration.

Note on Custom Splits: *The platform supports custom split modifications agreed bilaterally between partners prior to mandate acceptance, while preserving CIRIL's overarching royalty covenant.*

4.3 The CIRIL Corporate Royalty Engine (7.5%)

CIRIL headquarters derives its primary recurring operating revenue through an automated 7.5% royalty levy deducted symmetrically from both participating members upon deal closure:

CIRIL Royalty = (7.5% × Lead Giver Share) + (7.5% × Lead Receiver Share)

Because the sum of the Lead Giver's share and the Lead Receiver's share equals 100% of the gross brokerage, CIRIL effectively secures a baseline 7.5% royalty on the entire transactional gross revenue generated across its nationwide network. Both parties contribute proportionally to the network's central governance and technological infrastructure.

4.4 Detailed Financial Models & Illustrative Scenarios

The following mathematical models illustrate the exact distribution of proceeds for both lease and outright transactions without using proprietary client records:

Financial Metric / Milestone	Scenario A: Large Office Lease	Scenario B: Outright Land/Asset Sale
Deal Parameters	50,000 sq ft @ ₹80/sq ft/month	100,000 sq ft @ ₹2,500/sq ft capital rate
Gross Transaction Value	₹40,00,000 / month rent	₹25,00,00,000 (₹25 Crore) value
Total Gross Brokerage	₹40,00,000 (1 month rent)	₹25,00,000 (1% of deal value)
Lead Giver Share (30% Gross)	₹12,00,000	₹7,50,000
Lead Receiver Share (70% Gross)	₹28,00,000	₹17,50,000
Royalty Contributed by LG (7.5%)	₹90,000	₹56,250
Royalty Contributed by LR (7.5%)	₹2,10,000	₹1,31,250
Net CIRIL Corporate Royalty (7.5%)	**₹3,00,000**	**₹1,87,500**
Net Member Retained Revenue	LG: ₹11,10,000 | LR: ₹25,90,000	LG: ₹6,93,750 | LR: ₹16,18,750

4.5 Settlement & Invoicing Control

Once calculations are locked by the transaction managers, the CRM initiates an institutional audit protocol:

- **Automated Multi-Party Notification:** System dispatches concurrent deal conclusion notices to CIRIL Finance, the Lead Giver, and the Lead Receiver with complete transaction economics.
- **Payment Ledger Tracking:** Central administration monitors royalty receipts against open invoices, recording transaction references, remittance dates, and reconciliation status.
- **Member Standing & Compliance:** Timely royalty clearance preserves the Member Company's active status and privileges for receiving prime future corporate allocations.

5. Proprietary Research & Market Intelligence Engine

A major competitive advantage embedded within CIRIL is its proprietary Research & Market Analytics module. Rather than functioning as a passive database, the system transforms field transaction data into high-value institutional intelligence:

- **Rental Trends Analysis:** Continuous empirical tracking of commercial leasing values, micro-market escalations, vacancy absorptions, and effective versus asking rental benchmarks across major cities.
- **Major Deals Repository:** Central archival of landmark office, retail, and industrial transactions, documenting transaction velocity, multinational tenant expansions, and cap rates.
- **Major Upcoming Projects Pipeline:** Database of under-construction grade-A commercial complexes, warehousing logistics parks, and upcoming commercial corridors with delivery timelines.
- **Individual Data Mining:** Structured capture of micro-market landlord holdings, high-net-worth commercial investors, and upcoming enterprise lease expiries.

6. Strategic Network Synthesis

By integrating zoned member companies into a unified digital ecosystem, CIRIL resolves the historic challenges of the commercial real estate industry:

- **For Independent Member Brokers:** Instantly expands their client service capability from a single city to a pan-national reach, enabling them to win large multi-city corporate mandates they could not otherwise service alone.
- **For Corporate Occupiers:** Provides a single point of institutional accountability backed by local, on-the-ground market experts in every tier-1 and tier-2 business hub.
- **For CIRIL Corporate:** Creates an asset-light, highly scalable revenue model generating recurring 7.5% royalty cash flow across high-value commercial leases and outright acquisitions, reinforced by institutional market authority.
