CIRIL • INTERNAL OPERATIONS TRACKING SYSTEM

01 / Start here • Follow the arrows downward. Open linked boxes for detail. Blue: administration | Orange: management | Green: execution | Purple: intelligence

LAYER 1 • AUTHENTICATION & AUTHORIZATION

START • Corporate login

Validate identity, account & location
Record login context

Load authorised roles
Open primary workspace / switch role

LAYER 2 • MANAGEMENT, OPERATIONS & EXECUTION

ADMINISTRATIVE FUNCTIONS
Admin • Super Admin • IT Analyst

Provision accounts • set office rules
Monitor services • publish notices

Shared services

Attendance • availability • requests
Messages • personal account [07]

MANAGEMENT FUNCTIONS
General • Senior • Lead Manager

Plan work • check capacity
Assign owner, deliverables & deadline

Assign / notify

EXECUTION FUNCTIONS
Executive • BDE • Creatives Associate

Execute work • record time & progress
Attach evidence • submit for review

Submit

Review submission
Approve or return with corrections

Changes / issues

Corrections, blockers or overdue?
Resolve / revise / escalate [06]

Resume / revise

Approved

Approved work completed & closed
Decision and delivery history retained

Record outcomes

Record interventions

OPERATIONAL RECORDS
Work, evidence, attendance, requests, decisions, audit & linked CRM updates

LAYER 3 • INTELLIGENCE & ANALYTICS

Metrics • trends • risks
Daily / weekly / monthly reports [12]

CHAIRMAN • Vijay Sir
Operational health • royalty • attention items
Appraisal exports • announcements [13]

Authorised action & recognition
Managers resolve risks; Chairman reviews
3-month excellence nominations [13]

BUSINESS FLOWS [09–11]
Membership • deals • content & research

ROLE MAP [03]
Ten roles, three functional lanes

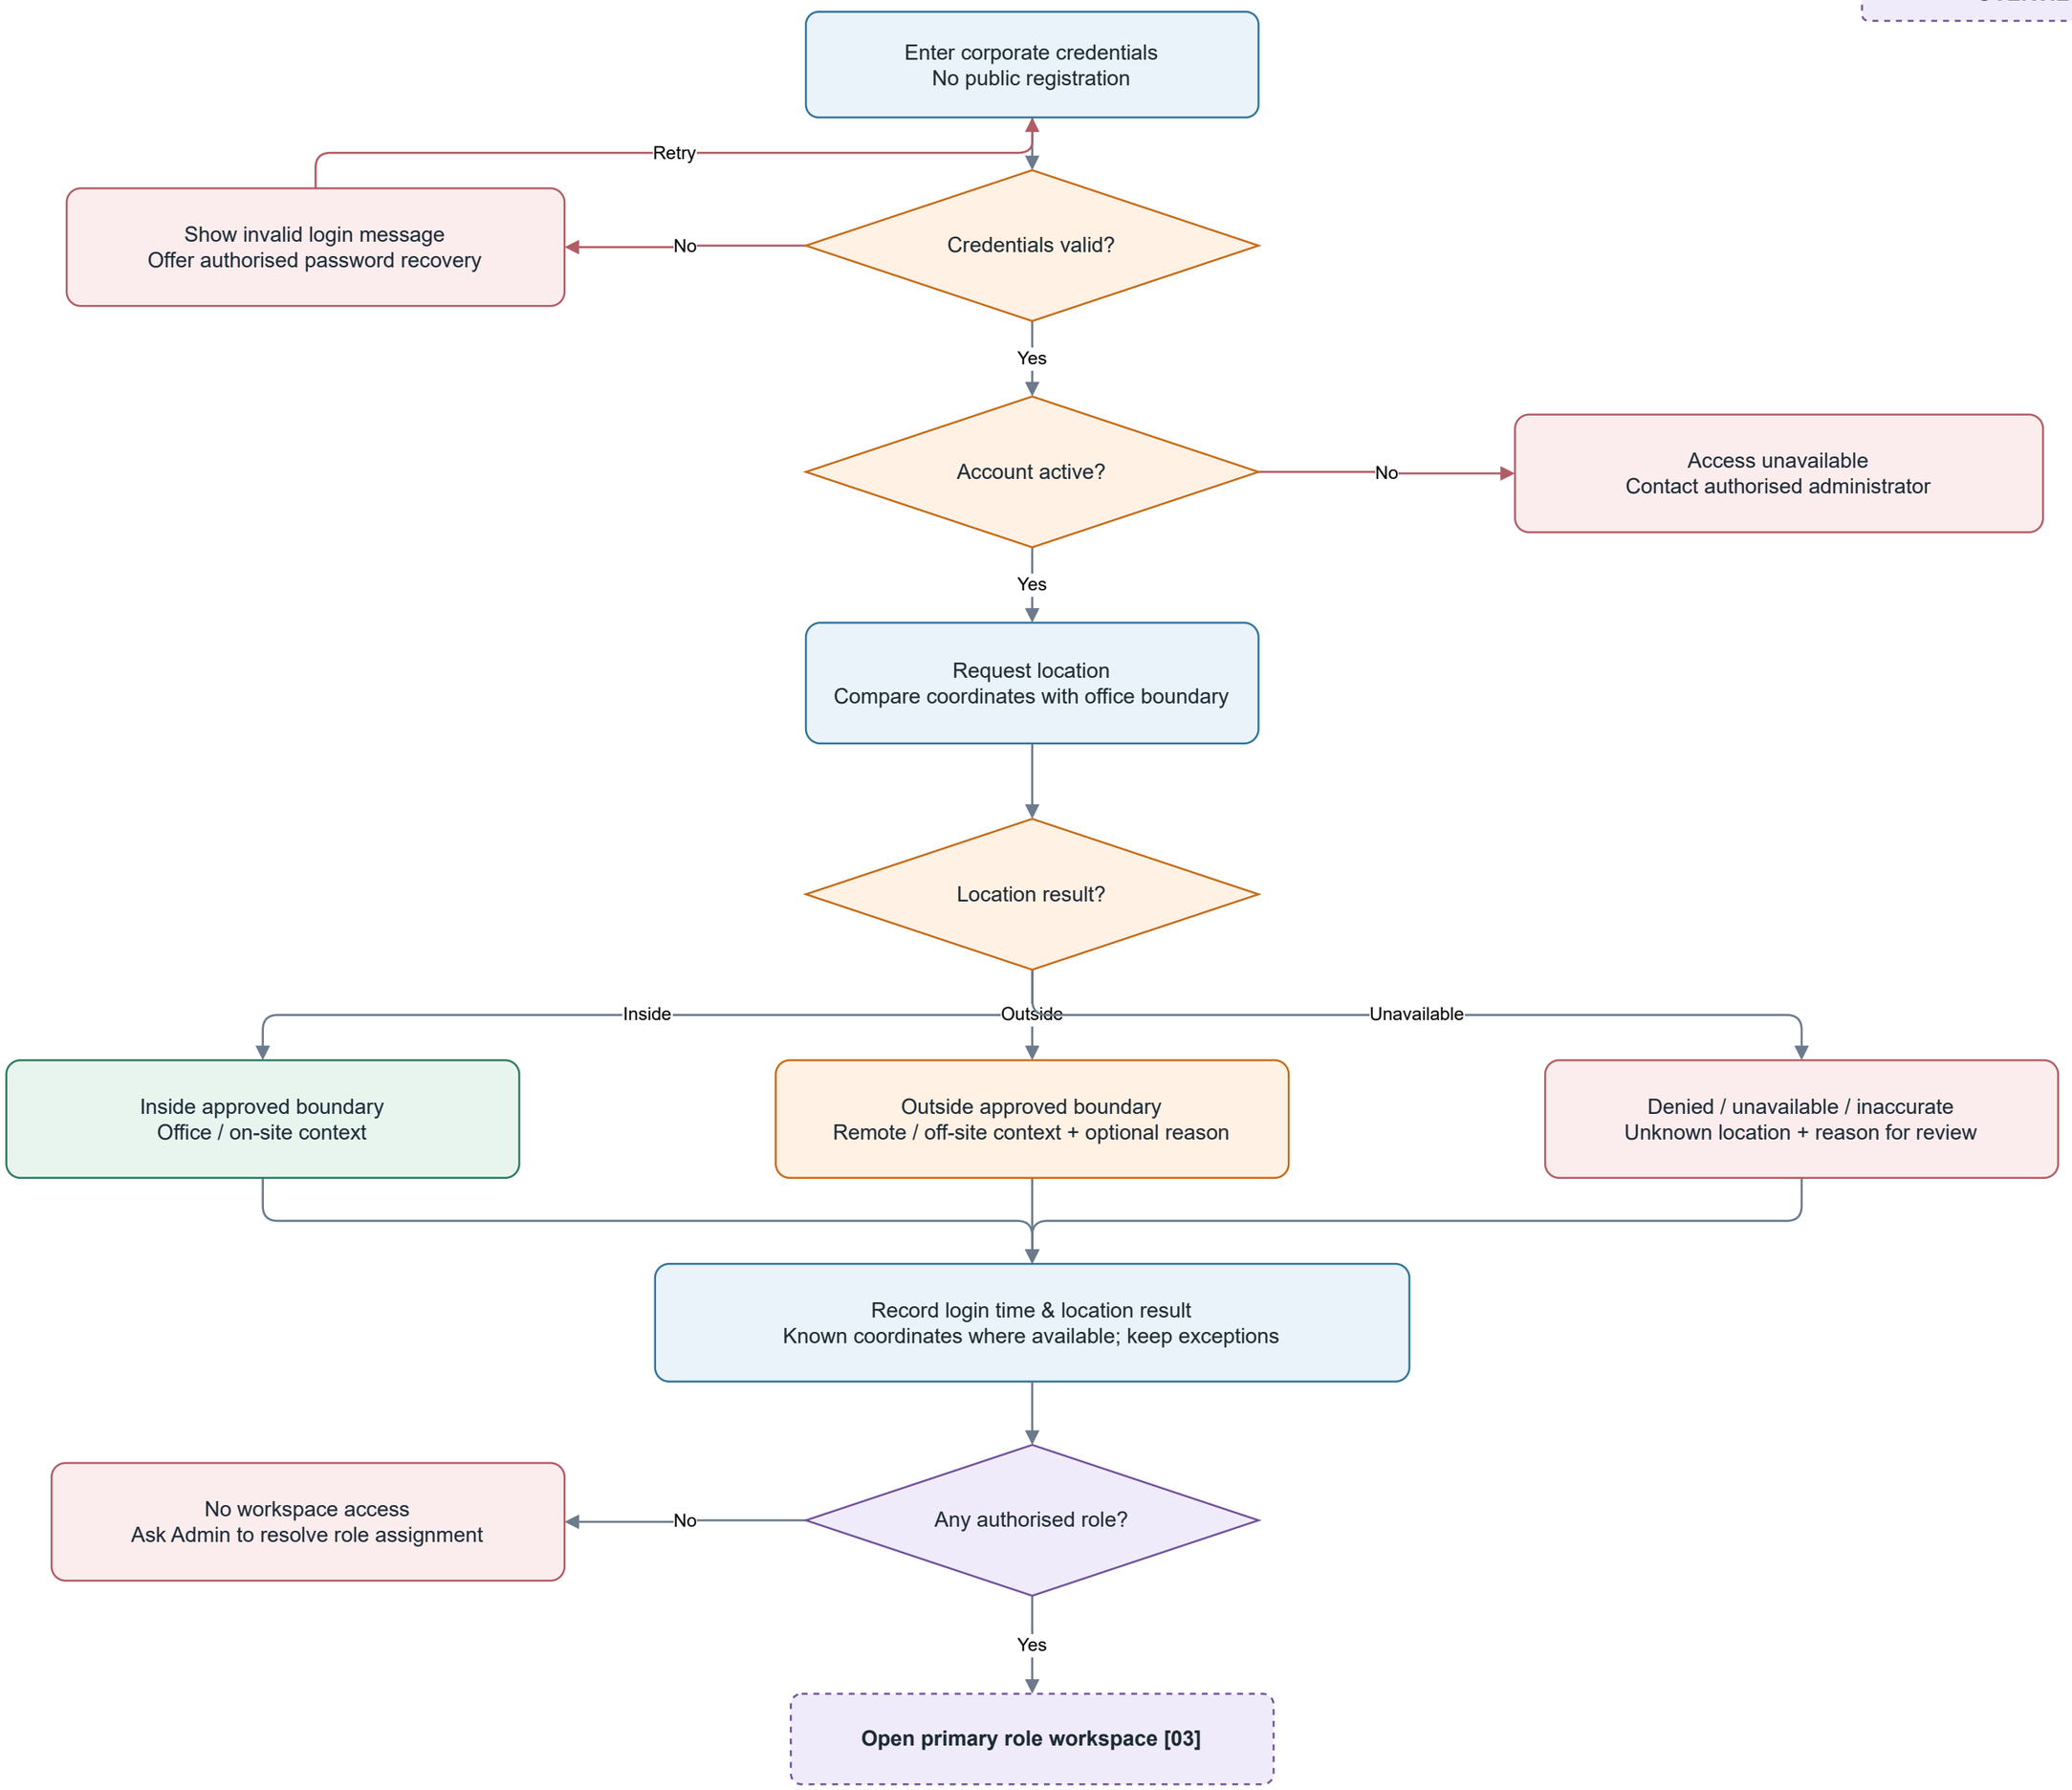

SOURCES & DESIGN DECISIONS [14]

Proposed IOTS design • HYD coordinates work across member offices. External member firms, accounts, legal teams and vendors are linked work participants; this chart does not grant them IOTS accounts.

02 • Secure entry & workspace selection

LAYER 1 • Retains the foundation: login → credentials → location → audit → role routing. Small additions cover account status, missing location and multiple roles.

← OVERVIEW

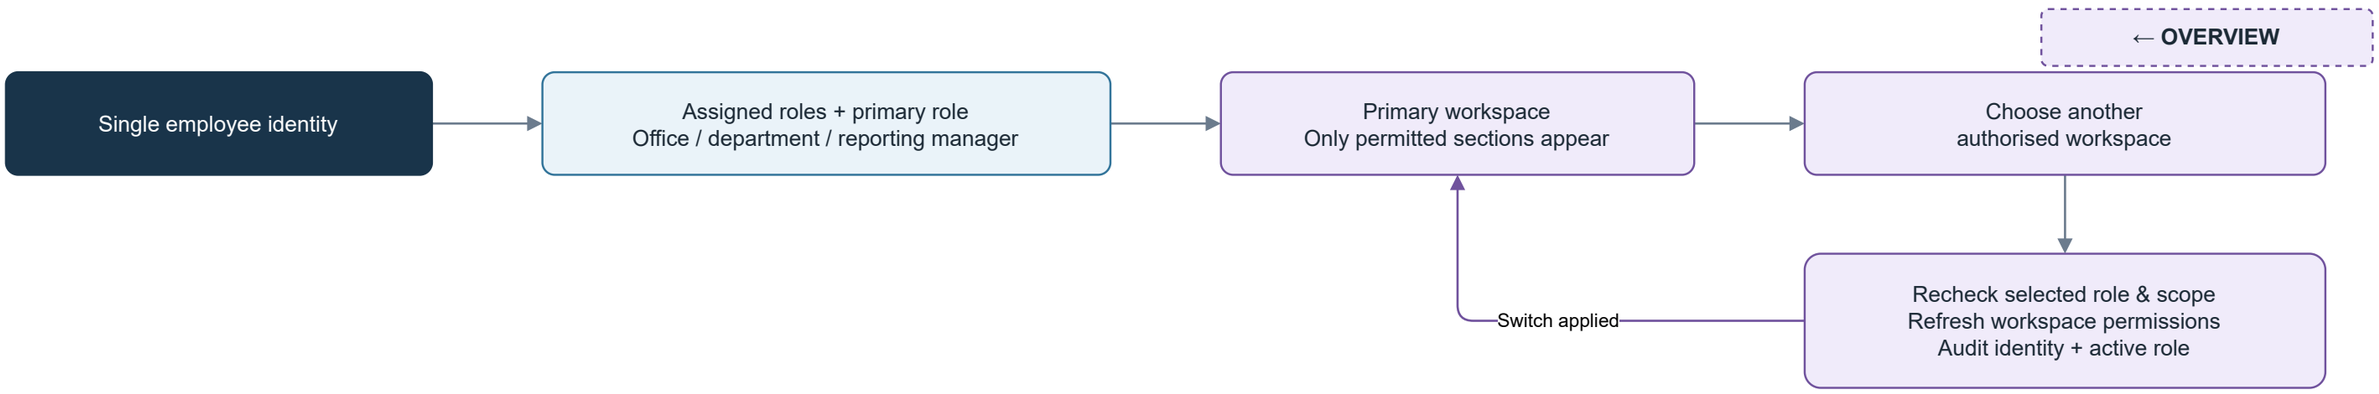

Location exceptions continue to the permitted workspace and remain available for attendance review. A remote label does not itself approve remote work or prove absence.

Recommended refinements: credential recovery uses authorised identity checks; permissions are checked on every action; expiry/logout ends the session. Attendance checkout is handled separately [07].

03 • One identity, ten roles, three functional lanes

LAYER 1 → LAYER 2 • Roles, designations and reporting relationships are configurable. A person may hold several roles; every action uses the active role and permitted data scope.

FUNCTIONAL ARCHITECTURE • The lane is a category; the role determines authority

ADMINISTRATIVE

ADMIN
Internal profiles, geofences, attendance exceptions, global oversight & notices [04]

SUPER ADMIN
Master organisation, roles, permissions, high-level accounts, audit & export policy [04]

IT SYSTEM ANALYST
Equal platform privileges to Super Admin; technical health, incidents & deployments [08]

Business approval requires an explicit business mandate, even with full platform privileges.

MANAGEMENT

GENERAL MANAGER
Operations, Board, finance, legal, audits, events, membership & office coordination [09]

SENIOR MANAGER
Cross-team capacity, deadline risk, escalated decisions & comparative performance [09]

LEAD MANAGER • Manasa
Operational team delivery; member deals, royalty follow-up, calls & reports [09–11]

CHAIRMAN • Vijay Sir
Executive oversight, attention items, all reports, announcements & award sign-off [13]

EXECUTION

EXECUTIVE
Assigned operational work, activity, evidence, blockers, revisions & personal services [05, 07]

BUSINESS DEVELOPMENT EXECUTIVE
Broker research, outreach, portals, campaigns, follow-ups & meeting records [10]

CREATIVES COMMUNICATION ASSOCIATE
Social media + design; content, proofreading, Office calls & conference assets [11]

Shared personal workspace: attendance, availability, requests, feedback, profile & security [07]

PERMISSION RULES

Chairman: broad visibility and strategic review. Routine password resets and task reassignment stay with authorised administrators/managers.

Harshitha example: Creatives Associate + Executive. One account; switch context; work and audit remain attributable to the same person.

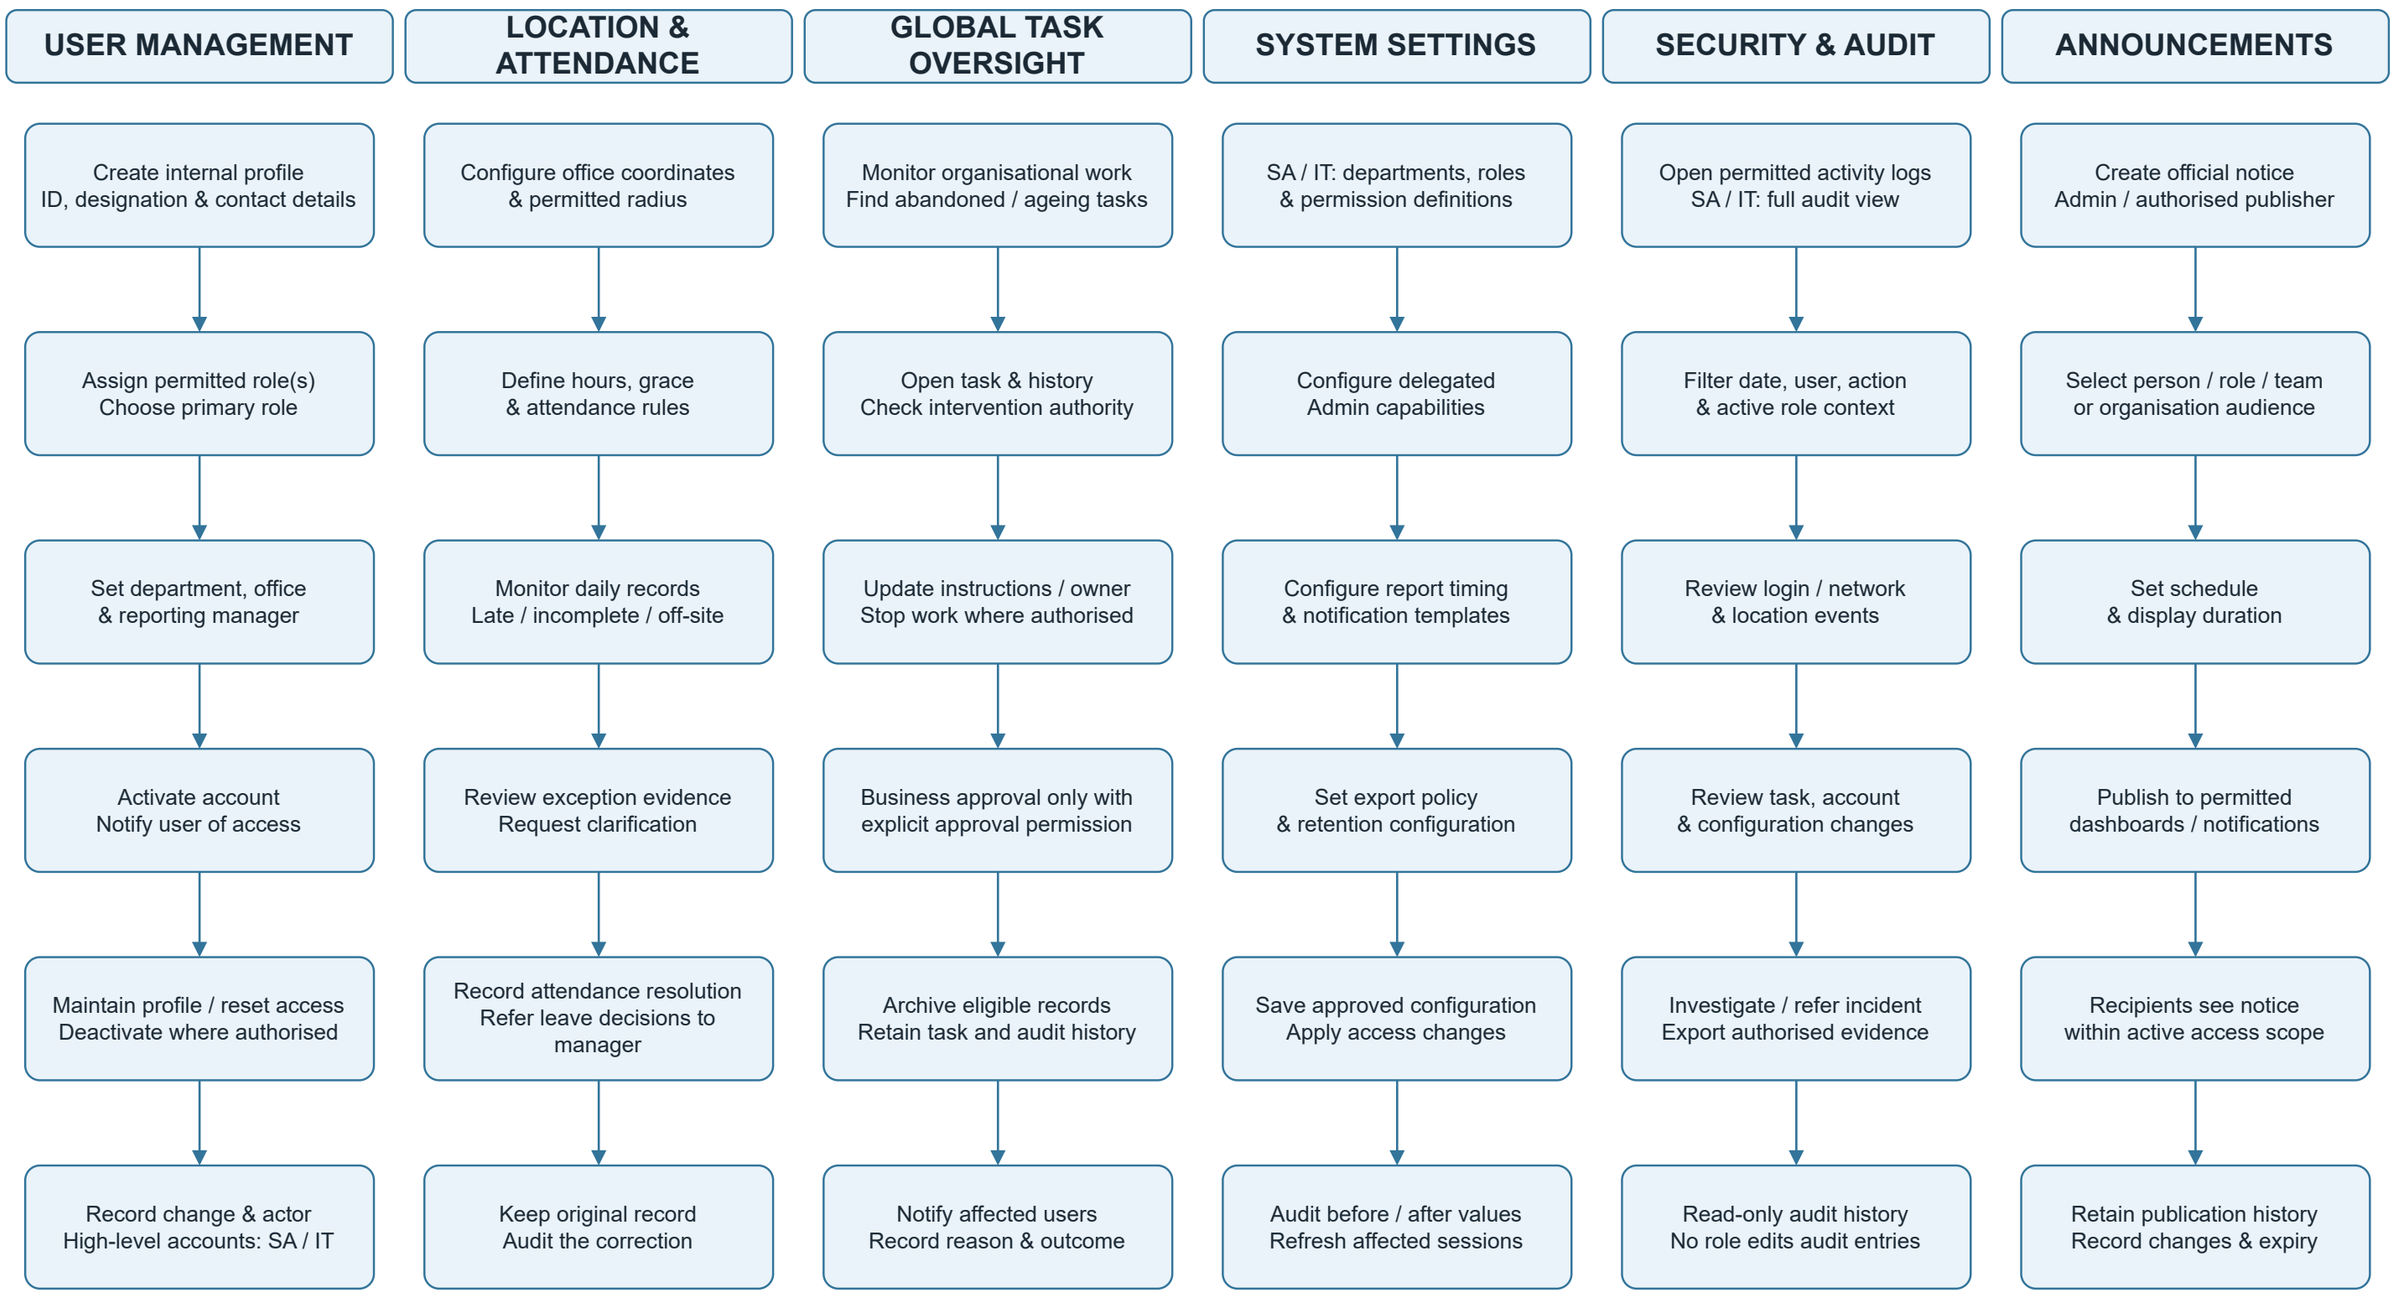

New roles or additional staff extend assigned capabilities. Roles do not fix headcount, automatically establish rank, or combine permissions across inactive workspaces.

Deployment context supplied by the requester: 1 Chairman; 3 BDEs; 2 IT Analysts; 1 Social Media Manager and 1 Graphic Designer; 1 GM / Assistant GM context. Creative functions share a role profile; people remain separate accounts.

04 • Administrative control & governance

LAYER 2 • Retains the original six Admin branches. Admin handles delegated routine controls; Super Admin and IT Analyst hold equal platform authority.

← OVERVIEW

EVERY CHANGE HAS AN OWNER, A REASON AND A HISTORY

Audit record
Employee identity • active role • timestamp • action • object • before/after values • reason • source (person/system)

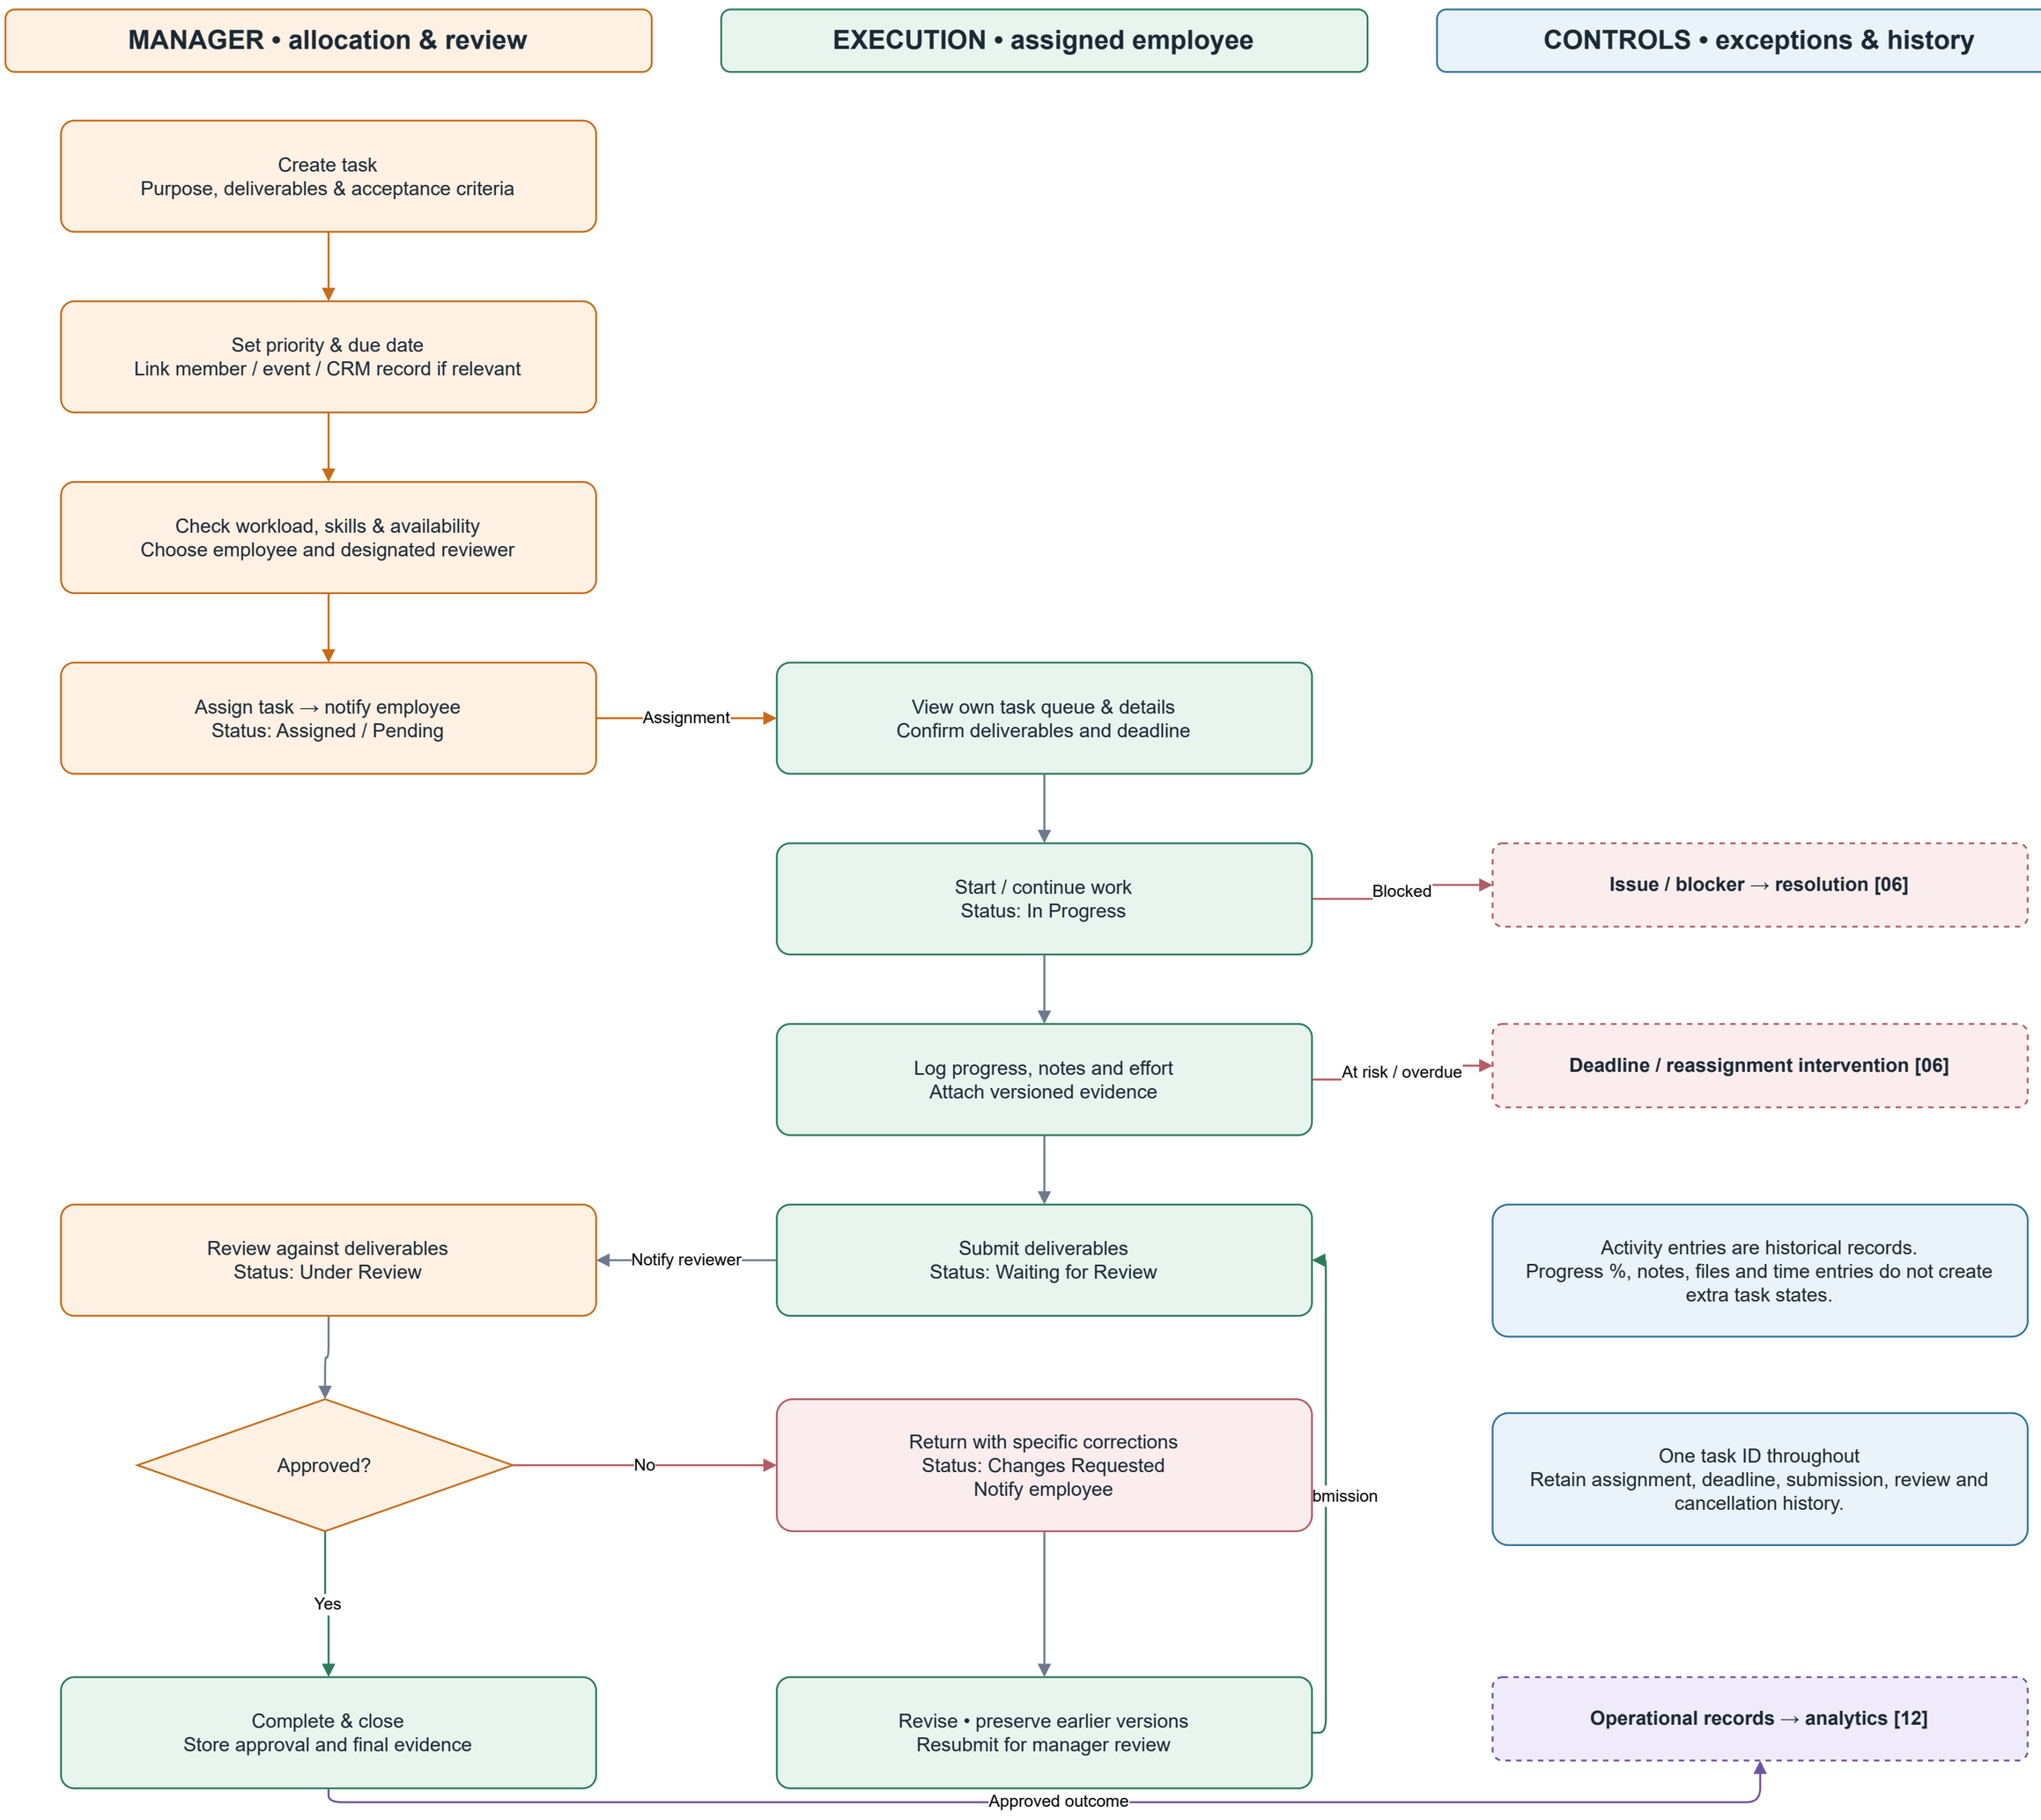

Escalation boundaries
Admin sends technical faults to IT [08]; operational decisions to the designated manager [09]. Platform access alone never grants commercial or leave approval.

SA = Super Admin. Role changes, account deactivation and delegated interventions preserve existing work history and notify the responsible owner.

05 • Shared work lifecycle: plan → deliver → review → close

LAYER 2 • Applies to all operational work: member coordination, outreach, events, creative assets, IT incidents and internal assignments.

← OVERVIEW

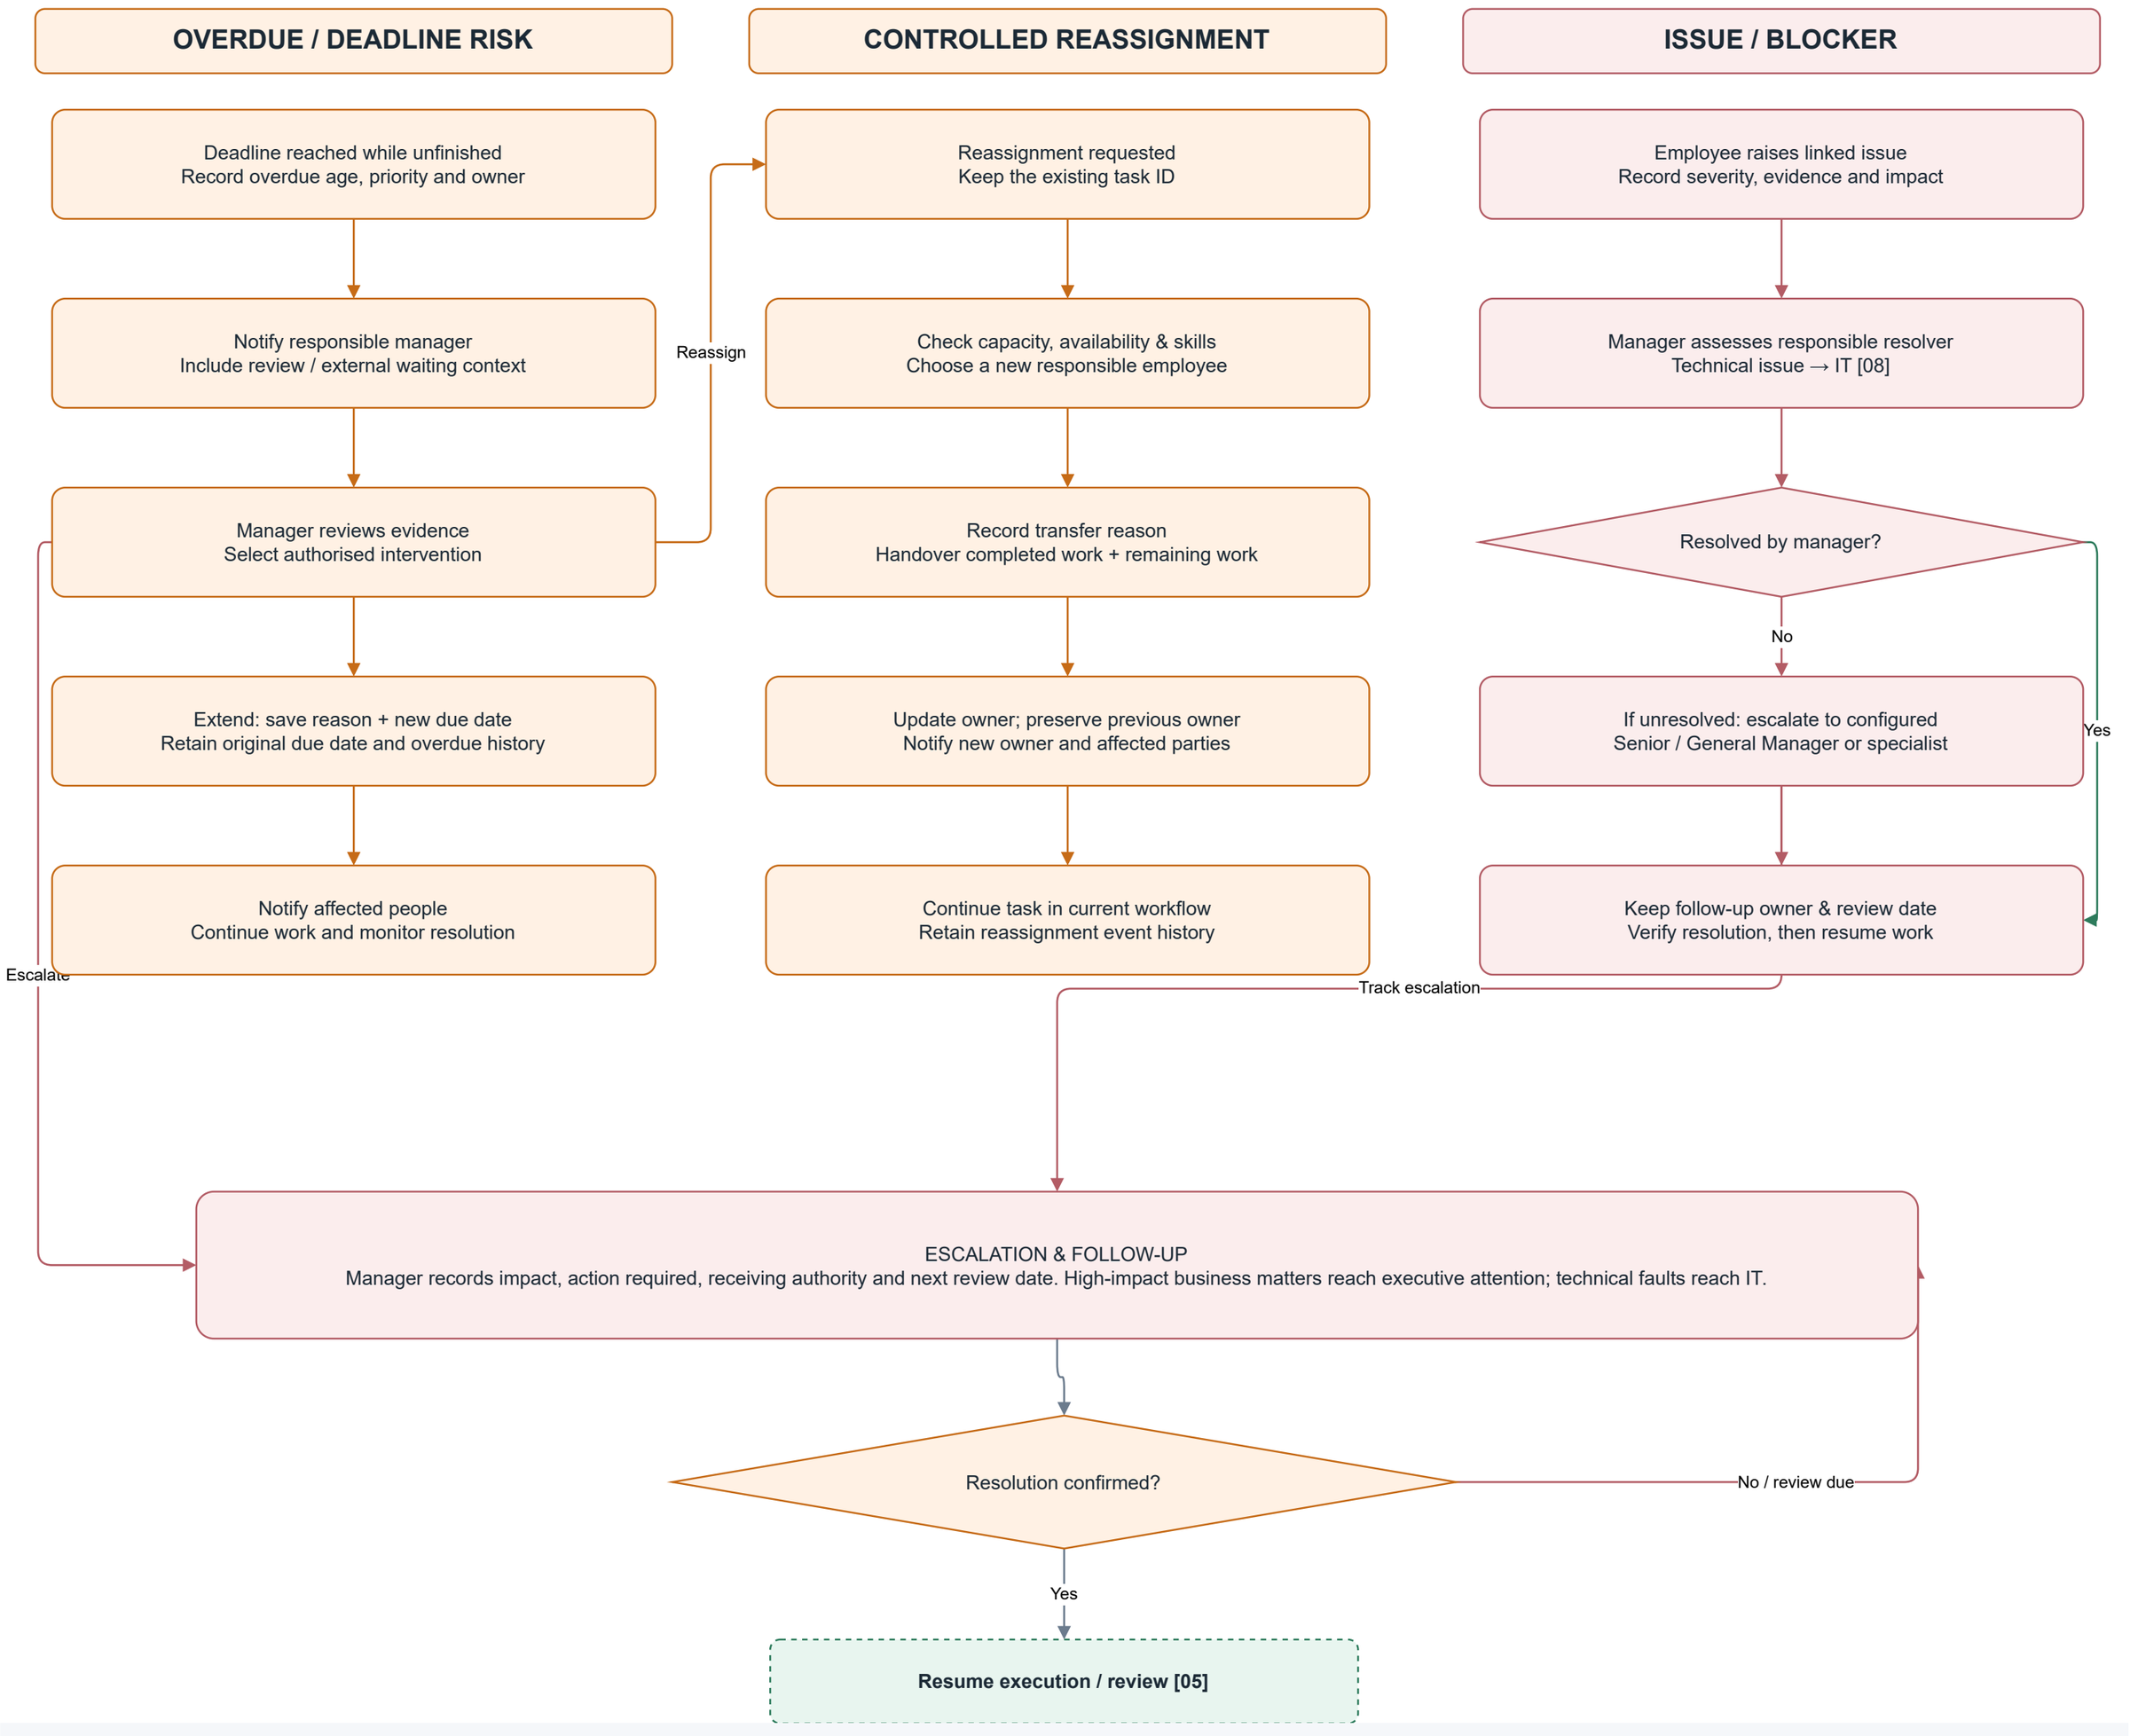

Cancellation is a separately authorised outcome with a recorded reason; it is never counted as completed work. Review delay remains visible. Reassignment is an event, and overdue is an exception overlay on an unfinished task.

06 • Keep work moving: overdue, reassignment & blockers

LAYER 2 • Every exception retains a task owner, a decision owner and a next review date. No task disappears when its deadline passes.

← OVERVIEW

Reassignment, approved extensions and issue resolution all append history. Escalation paths follow configured responsibility and authority; role names alone do not establish a reporting hierarchy.

07 • Attendance, availability & employee services

LAYER 2 • Shared personal services remain available to authorised employees across role workspaces. Attendance, online sessions and task effort have separate records.

← OVERVIEW

ATTENDANCE & AVAILABILITY

Check in
Capture time and location context [02]

Record attendance
Apply configured shift / grace / leave rules

Set availability; update while working
Managers use it to assess capacity

Check out
Capture end time and recorded breaks

Complete timestamps?
If yes: calculate policy-based work hours

Complete

Store attendance history
Employee sees own; manager sees team

REQUEST & SELF-SERVICE

Create request
Leave / permission / scheduled remote work

Or request guidance / resources
Add dates, reason and supporting details

Submit to designated authority
Notify reviewer; status Pending

Review and record decision
Approved / Rejected / Returned for detail

Notify employee; store decision history
Approved absence adjusts availability

Manager adjusts workload if needed
Pending decisions remain in attention queue

COMMUNICATION & PROFILE

Operational event occurs
Assignment, deadline, feedback or decision

Generate scoped notification
Task, reassignment, overdue or escalation

Employee opens linked item
Reads instructions, responds or acts

View personal activity & performance
Completion, attendance, feedback history

View profile / account details
Request controlled account changes

Change password / review active sessions
Log out or end selected session

Availability options
Available • Busy • In Meeting • On Break • In Training • Do Not Disturb • Working Remotely • On Leave • Absent • Offline

Leave / absence labels follow approved records and attendance rules.

Exceptions
Missing checkout or inconsistent hours → correction request → authorised review → audit correction.

Returned request → add details → resubmit. Rejection keeps reason and history.

Announcements
Admin / Chairman: permitted organisation audience. Manager: team audience.

Schedule → publish → display to recipients → keep publication history.

POLICY & RECORD QUALITY

Recommended: checkout is explicit; session expiry or a closed browser does not silently declare a full day worked. Geolocation failure is an exception for review. Shift times, grace limits, breaks and remote-work approval remain configurable.

08 • IT reliability & technical intervention

LAYER 2 • IT System Analyst has the same platform privileges as Super Admin, with a technical workspace. Business approval still follows the designated business authority.

← OVERVIEW

MONITOR & DIAGNOSE

- Monitor application and services
  Uptime, database latency, frontend response
- Inspect external service health
  Geocoding, mail, storage & rate limits
- Review security events
  Unusual logins, location jumps, timeouts
- Identify incident or reported bug
  Capture impact, severity and evidence
- Assign technical incident owner
  Set response / update expectations

Incident

RESOLVE & RESTORE

- Receive linked operational blocker
  or monitoring incident
- Diagnose failure
  Bug, deadlock, API or webhook delivery
- Apply authorised technical fix
  Track change and affected services
- Verify restoration with affected user
  Unresolved → retain / escalate incident
- Record resolution; notify manager
  Employee resumes linked task [05]

CHANGE & GOVERNANCE

- Record release / deployment request
  Version, owner and reason
- Record configuration changes
  Environment changes without secret values
- Record schema migrations
  Link incident or planned work
- Monitor after change
  Record outcome and recovery if needed
- Retain technical audit trail
  Apply shared governance controls [04]

Platform parity
IT Analyst and Super Admin can manage master roles, departments, high-level accounts and full audit access. Their default dashboards emphasise different responsibilities.

Approval boundary
Commercial fee splits, leave and business deliverable approvals require a separately assigned business mandate. Technical remediation does not close the related business task automatically.

Return to exception resolution [06]

Administrative controls [04]

09 • Operational management & CIRIL coordination

LAYER 2 • General / Lead Manager cards are independent work areas using lifecycle [05]. The centre column shows the Senior Manager review cycle.

← OVERVIEW

GENERAL MANAGER	SENIOR MANAGER	LEAD / OPERATIONS MANAGER
Receive organisational priorities Coordinate daily operations and teams	View cross-team work and capacity Operations, BD and creative teams	Manasa: coordinate members on deals Conclusions and royalty follow-ups [10]
Board: agendas, meeting preparation Minutes, decisions and follow-up owners	Identify overload & approaching deadlines Compare availability and priorities	Retail / L&W / Land / Hotel calls Coordinate vertical and client calls
Accounts: invoices, payments & expenses Legal: agreements, contracts and NDAs	Agree workload changes with owners Use controlled reassignment [06]	Office Space portal listings & enquiries Route to member offices; follow up
Coordinate auditor and internal teams Track compliance, filings & evidence	Review high-impact escalated decisions Check evidence and approval authority	Collect market data; prepare quarterly lead exchange and business statistics
Annual / zonal conferences Hotels, vendors, members and speakers	Compare team performance trends Investigate recurring delays / blockers	Member performance ratings Raw zonal conference presentations
Membership discussions & virtual meetings Coordinate member-office requirements	Record decision, feedback or escalation Notify responsible managers	Bitra website updates; printers Stationery, reports & annual event assets
Review outcomes, outstanding actions & cross-functional escalations	Monitor improvement and resolution Keep open actions visible	Membership agreements & annual fees Track signatures, payment follow-up

COMMON MANAGEMENT CYCLE • eight original branches retained

Task Management & Workflow [05]
Team Management: people → profile → assignments → workload → availability → progress
Workload Management: identify overload → balance → record transfer [06]

Performance Monitoring: completion → deadline adherence → concerns → feedback → improvement
Attendance Management: late / absent / location exceptions → leave review → adjust work [07]

Team Communication: instructions, updates, messages, reminders
Feedback & Evaluation: review → feedback → evaluation history
Issues Management: severity → resolve / escalate → follow-up [06]

Each business activity becomes assigned work with evidence and a designated reviewer [05]. External accounts, legal advisers, auditors and vendors provide inputs; their participation does not imply a new IOTS role.

10 • Membership development & commercial follow-up

LAYER 2 • BDE outreach develops the member network. Member brokers transact in CIRIL CRM; IOTS records HYD coordination, evidence, deadlines and follow-up responsibility.

← OVERVIEW

BDE • MEMBERSHIP PIPELINE

- Research brokerage prospects
  RERA portals, directories and Google
- Verify contact and source
  Maintain prospect research record
- Cold calls, structured email
  Professional WhatsApp campaigns
- Operate Upturnly and 99acres
  Log call outcome and next follow-up
- Interested prospect → schedule meeting
  GM presents membership proposition
- Record discussion and agreed next step
  Not ready → dated follow-up queue
- Coordinate agreement and annual fee
  Lead Manager tracks required completion
- Reviewer confirms membership task
  Keep documents and outcome history

MEMBER DEAL • CRM MILESTONES

- Lead Giver records client requirement
  Vertical, geography and agreed shares
- Route to receiving member office
  Receiver accepts / rejects with reason
- Accepted → proposals, site coordination
  and negotiation with supporting documents
- Deal concluded → brokerage breakdown
  Use agreed financial terms
- Authorised brokerage acceptance
  Record accepted terms in CRM
- Royalty follow-up & payment evidence
  Responsible finance / CRM authority confirms
- CRM royalty paid / deal concluded
  Payment dates, remarks and notifications
- IOTS reconciles latest verified status
  Chairman sees due vs collected royalty

HYD • IOTS COORDINATION

- Link CRM lead / member reference
  Assign internal coordination task [05]
- Rejected / unanswered?
  Capture reason; owner coordinates next step
- Track member and client follow-ups
  Record call outcomes and external waiting
- Lead Manager follows concluded deals
  GM coordinates accounts and exceptions
- Terms disputed / evidence missing?
  Return to business authority for correction
- Unpaid? Set follow-up date and owner
  Ageing balance remains open / escalate
- Verify payment confirmation source
  No completion from a promised payment
- Close approved coordination task
  Keep CRM and task outcomes distinct

Rejected / no repl

Accepted

Not yet paid

Verified paid

ROYALTY CONTEXT • validated against company PDF and CRM calculation code

Lease brokerage
ROUND(monthly rate × area × agreed lease days ÷ 30)

Sale brokerage
ROUND(1% × outright rate × area)

Agreed Lead Giver / Receiver shares
Read each deal's percentages, including custom shares.

CIRIL royalty = ROUND(7.5% × LG share + 7.5% × LR share).

Traceability
CRM owns lead, brokerage and payment facts. IOTS links verified records and tracks staff work.

Integration / import mechanism remains to be designed.

Receipt evidence and accepted terms must be checked by the designated business authority. Member firms and CRM roles are not automatically mapped to IOTS Super Admin or IT privileges.

11 • Creative communication, market reports & delivery

LAYER 2 • Creatives Communication Associate combines social media and design capabilities. Executive tasks can be added to the same employee through a second authorised role.

← OVERVIEW

CONTENT & DESIGN

Receive creative brief / campaign task
Audience, channel, output and deadline

Draft copy and visual assets
LinkedIn, Instagram, YouTube, corporate

Save versioned draft
v1.0 → v1.1 → v2.0 with change notes

No: changes requested

Submit for internal review
Check content, accuracy and brand

Approved for release?

Yes

Yes → Approved for release
Schedule or publish to authorised channel

Store published link / final asset
Record delivery evidence and close [05]

Review campaign / delivery results
Use role-specific targets and feedback

QUARTERLY MARKET REPORTS

Lead Manager requests member data
Office, land and logistics / warehouse

Members supply research evidence
Trends, major deals and upcoming supply

Consolidate period / city / vertical data
Missing or inconsistent → follow up

Creatives Associate proofreads
Validate content and brand alignment

Design and format report
Keep source and revision references

Authorised manager reviews publication
Return corrections until approved

Release approved report / print artwork
Store final version and distribution record

Record completed reporting work
Feed quality and timeliness analytics

EXECUTIVE & EVENT SUPPORT

Open assigned operational queue
Review priority, deadline and evidence

Harshitha: Office Vertical support
Zone-wise calls and client updates

Record call outcomes and next actions
Route member queries to responsible owner

Conference presentation collaterals
Coordinate slides and digital archives

Design IDs, banners and nameplates
Stationery and other event materials

Manager approves final versions
Lead Manager coordinates printers

Record received / delivered outputs
Resolve quality issues before closure

Submit task evidence for review [05]
Request help or report blockers [06]

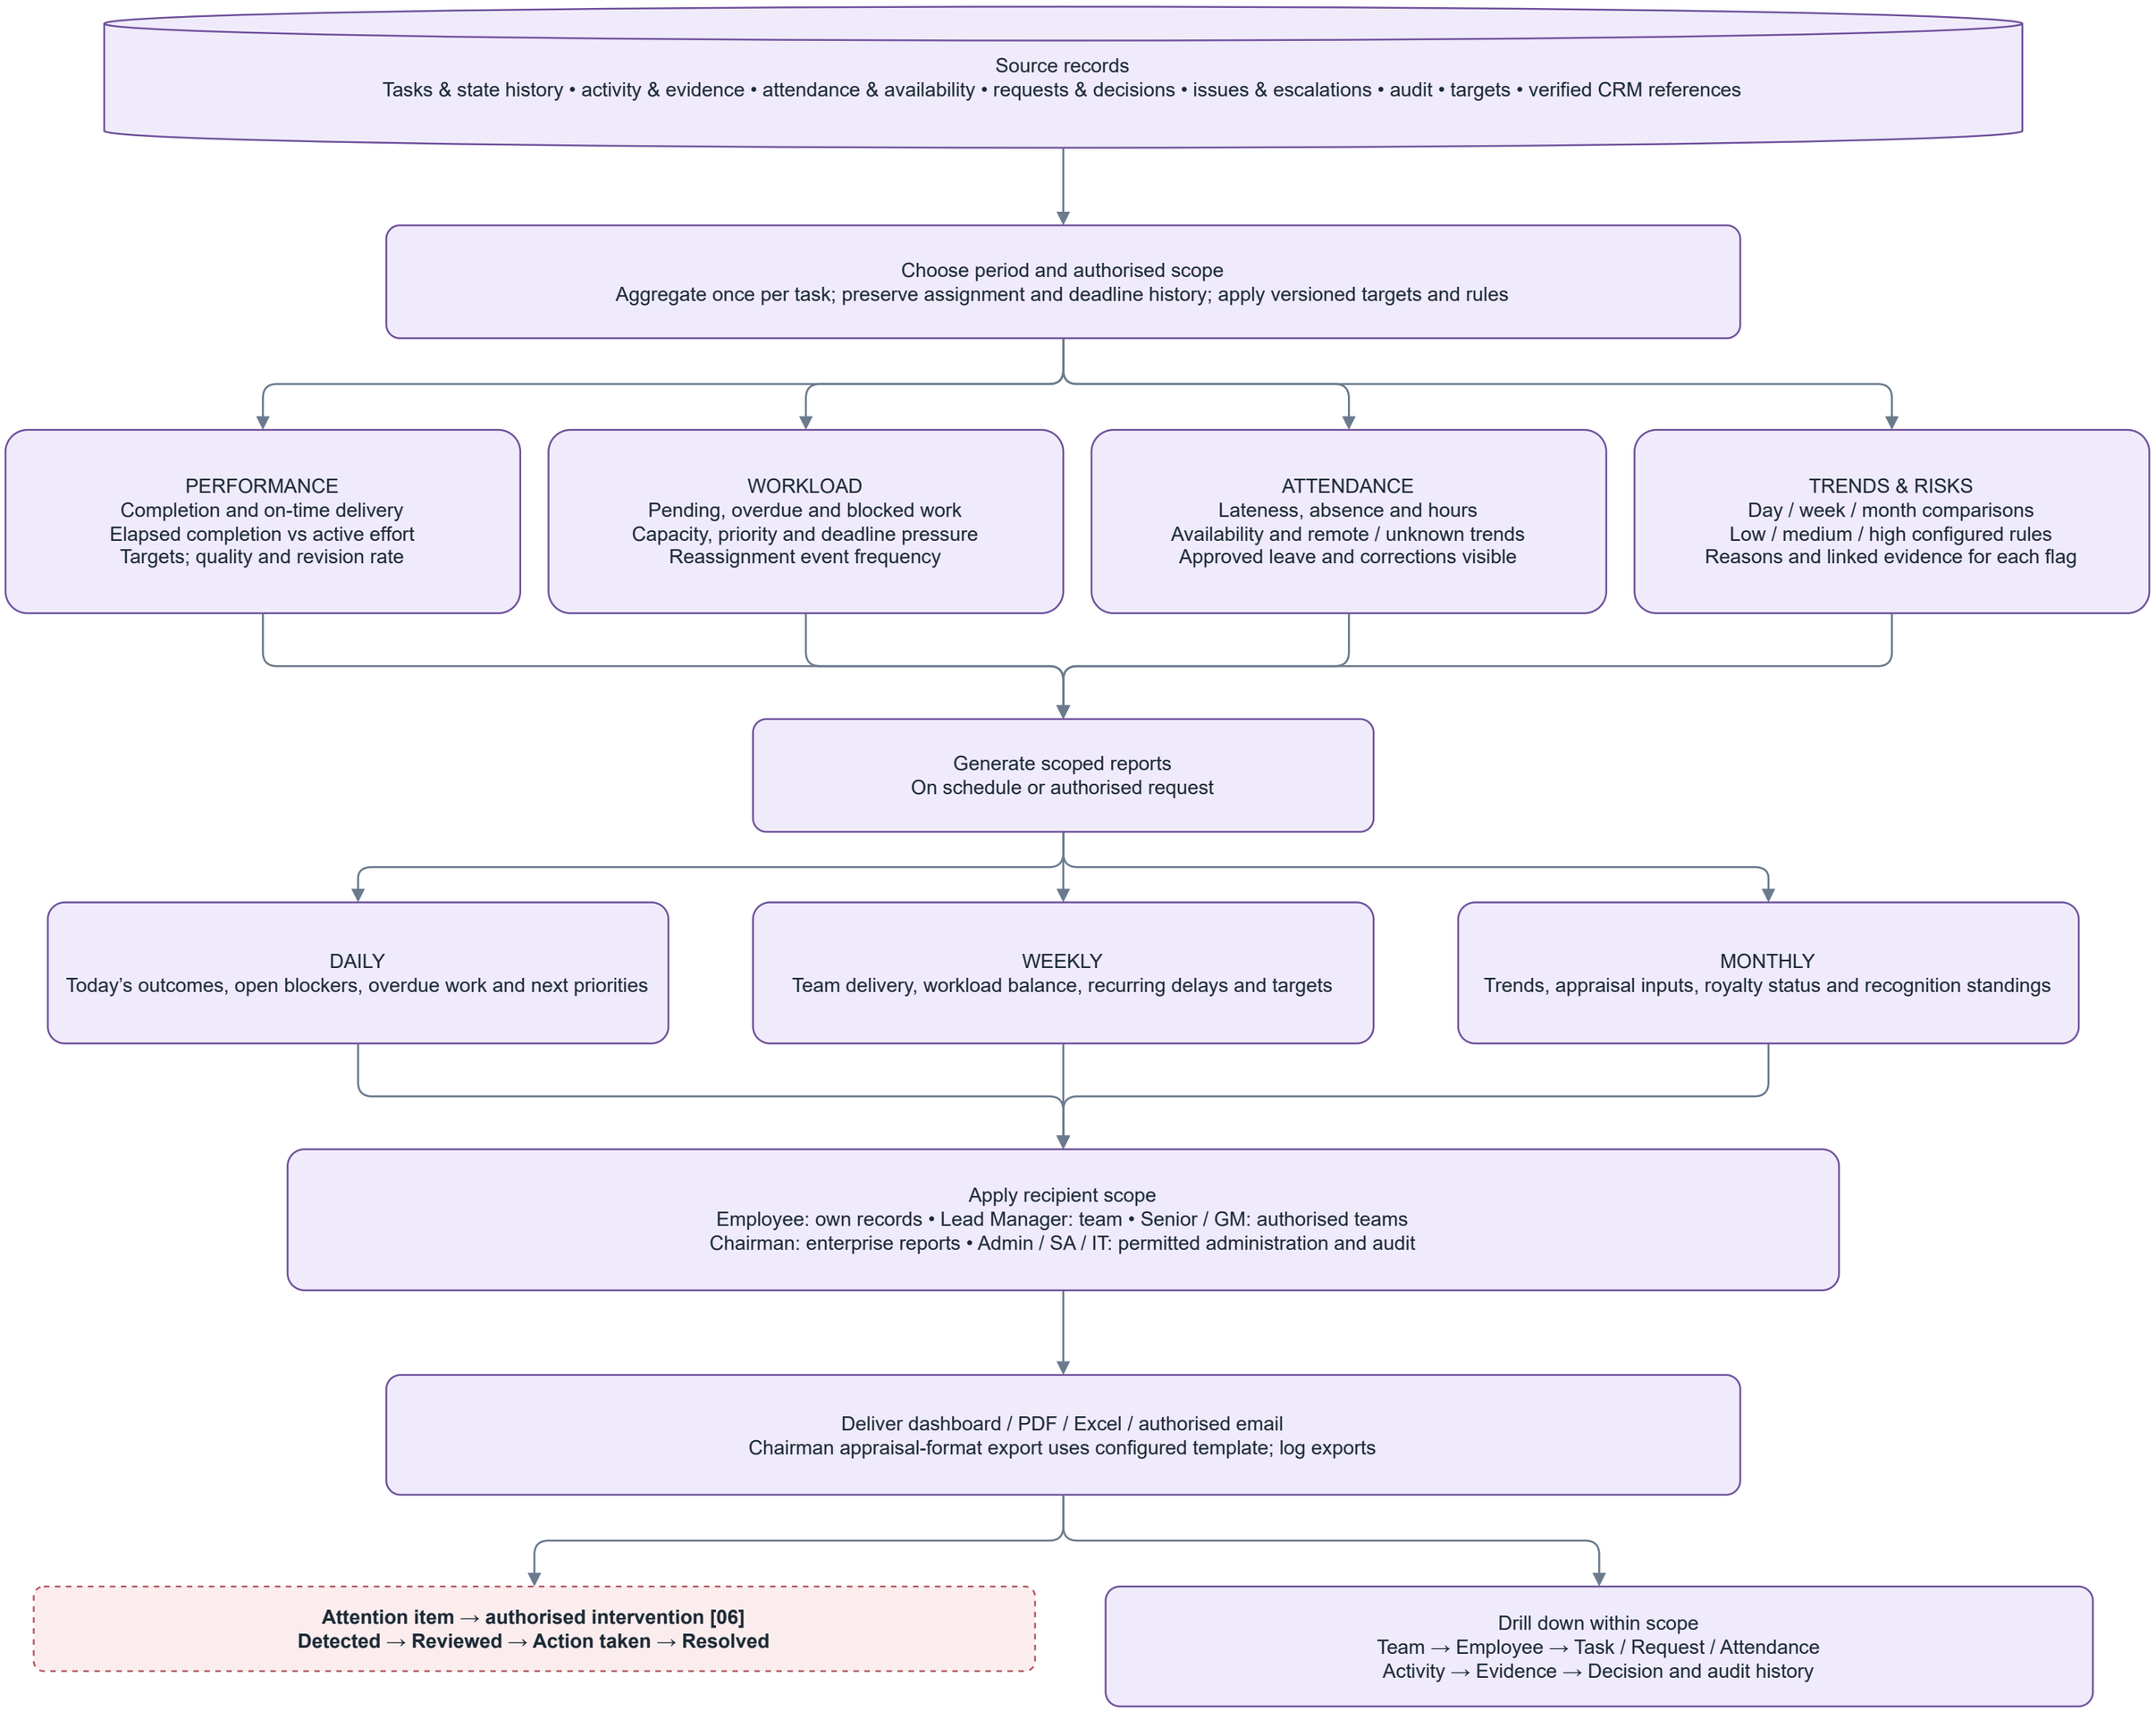

Creative release gate
Brief → Drafting → Internal Review → Changes Requested → Approved → Published. Changes loop back to drafting and review. A design approval alone does not mean the item has been published.

Work attribution
Harshitha can switch between Creatives Associate and Executive. Separate employee accounts remain for separate people, including social media and graphic design staff.

12 • Operational records → intelligence → action

LAYER 3 • Analysis reads recorded work and preserves permission scope. Every indicator links to the records that explain it.

← OVERVIEW

Metric rules: show counts and denominators; cancelled tasks are excluded from completion where administrative; reassignment never creates another task count; zero denominators show N/A; missing targets show “Target not configured”.

On-time results use the applicable approved deadline and retain original-deadline / extension history. Prior overdue events stay visible. Workload warnings are configurable rules; approval and reassignment remain human decisions. Predictive models are a future option.

13 • Chairman oversight, appraisal & recognition

LAYER 3 → AUTHORISED ACTION • Vijay Sir sees the overall operational picture and can inspect underlying evidence.

← OVERVIEW

EXECUTIVE OPERATIONAL VIEW

- Review enterprise operational health
  Teams, delivery trends and major risks
- Inspect commercial deal flow
  Royalty due, collected and outstanding
- Review attendance / location summaries
  Remote and unknown trends with context
- Open Requires Attention
  Overdue clusters, reassignments, blockers
- Inspect evidence and responsible owner
  Direct follow-up to authorised manager
- Review outcome on next reporting cycle
  Unresolved items remain visible

MONTHLY → QUARTERLY RECOGNITION

- Apply approved role-specific KPIs
  Use quality, delivery and verified records
- Generate monthly performance standing
  Show rule version and evidence
- Manager validates exceptions / context
  Employee can request score review
- Three consecutive qualifying months?
  - Yes → Yes: build quarterly excellence dossier
    Include three-month history and evidence
  - Yes → Chairman reviews and signs off
    Record decision and recognition outcome
  - ext month → Generate monthly performance standing

REPORTS & ANNOUNCEMENTS

- Choose period, scope and report type
  Enterprise / team / individual appraisal
- Generate configured appraisal format
  Export approved report with audit entry
- Create Chairman announcement
  Select enterprise audience and schedule
- Publish official communication
  Display in authorised employee workspaces
- Record publication and decision history
  Keep supporting documents accessible
- Review acknowledgement where configured
  Follow up through responsible management

Authority boundary
Chairman reviews intelligence, strategic attention and recognition. Routine task reassignment and employee password resets remain with authorised managers and administrators.

Recognition policy to approve
Supporting document proposes 100-point scoring and Gold ≥90. Treat scoring weights, thresholds, incentives and qualifying periods as configurable policy pending CIRIL approval. Three consecutive qualifying months and Chairman sign-off are required.

Fair interpretation: approved leave, remote work, external blockers and review delays retain their context. Recorded hours alone do not prove output quality. Display the evidence behind each standing and keep score-review decisions.

Management action [09]

Reporting and metric rules [12]

14 • Source basis, refinements & implementation decisions

Reading guide • 01 overview; 02–03 entry and roles; 04–11 operations; 12–13 intelligence. This file is an operational design, not a claim that these IOTS features are implemented.

← OVERVIEW

AUTHORITATIVE REQUIREMENTS

gpt_prompt.txt
Ten roles and supplied responsibilities; multi-role context; three layers; Chairman visibility; equal SA / IT platform privilege; business approval boundaries.

BUSINESS FOUNDATION

ciril_crm_detail.pdf, 20 pages
Member network, lead giver / receiver, variable brokerage shares, lease-day calculation, 7.5% royalty, negotiation, proposals, payment and research context.

PRESERVED DESIGN

../Flowchart/Actual-FlowChart.drawio
Login / location / audit sequence; three architectural lanes; six Admin branches; eight Manager branches. Complete employee and analytics flows from Construct.txt.

SUPPORTING MATERIAL

claude_version.docx
Task revision, audit principles, attendance, reporting and recognition concepts. Explicit prompt roles override section 2.2. Fixed share, scoring and shift examples are not binding company policy.

VISUAL FOUNDATION

referential-flowchart.jpeg
Dark start/end; blue administrative controls; orange management; green execution; purple reporting; rounded process boxes, decision diamonds and orthogonal connectors.

CRM CROSS-CHECK

Local code found at CRM/Updated/public_html/public_html
Reviewed routes, lead / assignment / brokerage / royalty controllers, key models and SQL schema. The requested CRM/Update/public_html location is absent.

REFINEMENTS THAT COMPLETE THE FOUNDATION

Entry and permissions
Preserve the original login flow; add active-account / no-role cases, unknown location, primary role and context switch. Enforce active-role scope on actions and reporting.

Work and accountability
Complete submission / correction / approval loops; explicit owner and escalation follow-up; separate task state from activity; overdue is a flag; reassignment keeps one task identity.

Records and insight
Separate checkout from session end; preserve corrections and history; role-scoped reporting; rules explain risks; Chairman appraisal and three-month recognition review.

OPEN DESIGN CHOICES • configurable, with no invented company policy

Confirm approval and escalation matrix; working hours, grace periods and break rules; report schedules; appraisal template; recognition scoring; retention rules; designated financial authority; CRM linking / import mechanism.

CRM caution: current users.roleId is a single role field; IOTS multi-role assignment is a new requirement. CRM royalityStatus updates lead_status to 8 but inserts status_id 7 into lead_statuses. Mapping needs reconciliation before integration.

Historical chat_gpt_chats.pdf was not needed. Draw.io MCP is unavailable in this session; this artifact uses native editable Draw.io XML. Sources are local; no source document or CRM application was modified.
